

JTI

Jung Type Indicator

Suitable for

- Adults and young people 15yrs+

Use for

- Personal and team development

Test format

- Online questionnaire
- 10 minutes

Overview

Psychological Type is the most widely used personality model in the world. The JTI, developed as an alternative to the Myers-Briggs Type Indicator®, provides a focused assessment of personality within Jung's model of Psychological Type. It is ideal for individual assessment and development, career counselling, and team-building.

Measures

The JTI is based on the work of Swiss Psychologist Carl Jung, who identified how our preferences influence how we relate to the world and others around us. Jung's model of Psychological Type identifies dimensions of preference: Extraversion vs. Introversion (E/I), Thinking vs. Feeling (T/F) and Sensing vs. Intuiting (S/N). The fourth dimension, Judging vs. Perceiving (J/P), identifies a person's dominant preference towards the world as either a judging attitude (T or F) or a perceiving attitude (S or N).

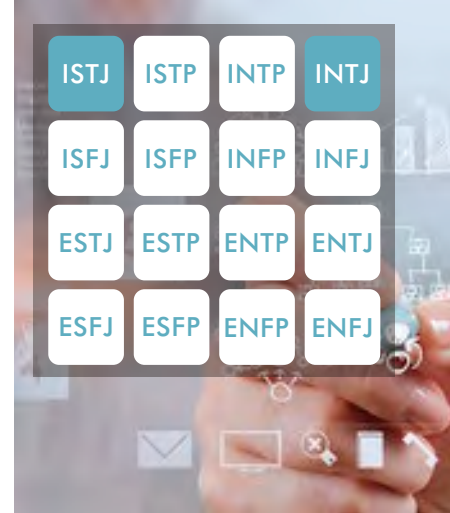

Reports

- Standard Report (9-10 pages)
- Group Report

Advantages

- Quick to complete
- Uses a scaled measurement approach for more detail
- Stronger reliability than many type instruments
- Excellent alternative to the MBTI®
